

FL-01 Workflow Audit

Student: Ali Muhab

Phase: Setup

Weekly Task	Classification	Rationale
Search for AI/ML internship opportunities	Collaborate with AI	AI can find opportunities and summarize requirements, but I decide which roles fit my goals.
Customize my CV for each internship	Delegate to AI with review	AI can tailor keywords and formatting, but I verify every technical detail.
Write internship cover letters	Delegate to AI with review	AI creates a strong first draft; I personalize it before submitting.
Solve machine learning assignments	Collaborate with AI	AI explains concepts and checks reasoning, but I solve and understand the work myself.
Debug Python and ML code	Collaborate with AI	AI speeds up debugging, while I validate fixes and understand the solution.
Read research papers or documentation	Delegate to AI with review	AI summarizes key ideas, but I read important sections myself.
Prepare for technical interviews	Collaborate with AI	AI acts as an interviewer and explains mistakes while I practice independently.
Write project documentation (README, reports)	Delegate to AI with review	AI improves clarity and structure, but I ensure technical accuracy.
Brainstorm AI project ideas	Collaborate with AI	AI generates possibilities, while I evaluate feasibility and originality.
Organize weekly study schedule	Fully automate	AI can generate and update study plans automatically based on deadlines.
Track internship applications	Fully automate	A spreadsheet or AI workflow can automatically organize applications and reminders.
Decide which internship offer to accept	Just Me	This depends on my personal career goals, values, and long-term plans.
Maintain academic integrity during exams	Just Me	AI should never replace my own knowledge in graded assessments.

Three Target Tasks for FL-02 to FL-04

1. Tailoring internship applications

Why this task?

I perform this several times each week.

Done well means

- CV matches the job description.
 - Cover letter is personalized.
 - Application completed in under **30 minutes**.
 - No incorrect or exaggerated information.
-

2. Debugging ML/Python projects

Why this task?

I regularly work on assignments and AI projects.

Done well means

- Error identified within **15 minutes**.
 - Final code runs without errors.
 - I understand the fix instead of simply copying it.
 - Tests pass successfully.
-

3. Learning new AI concepts

Why this task?

I'm continuously studying topics like LLMs, LangGraph, and machine learning.

Done well means

- I can explain the concept in my own words.
- I completed one small coding example.
- I score at least **80%** on a self-made quiz or practice questions.
- I can apply the concept in a project within one week.
